FROM:

ASRC Searcher in EIC3700

SUBJECT:

Search Results for Serial 09/839791

Attached are the search results for the paper liner for plastic grocery bags, including results of inventor and prior art searches in foreign/international patent databases and prior art searches in nonpatent literature databases. I also searched the Web using the Google search engine.

The results are organized into four sets:

- Results of inventor search in foreign/international patent databases;
- Results of prior art search in foreign/international patent databases;
- Results of non-patent literature search; and
- Internet results.

Results appear after the database names and search strategy used for those results. I tagged items that I thought seemed most relevant, but I suggest that you review all of the results.

Also attached is a search feedback form. Completion of the form is voluntary. Your completing this form would help us improve our search services.

I hope the attached information is useful. Please feel free to contact me (phone 305-5934 or email jeanne.horrigan@uspto.gov) if you have any questions or need additional searching on this application.

PATENT APP# - DATE OF APPLICATION

GB 7256644 - 721208

US 235908 - 720320

SOURCE: Brit. pat. 1,411,759. Issued Oct. 29, 1975. 8 claims. 9 p. Filed: Brit. appln. 56644/72 (Dec. 8, 1972). Priority: U.S. appln. 235,908 (March 20, 1972).

PUBLICATION YEAR: 1975 DOCUMENT TYPE: PATENT LANGUAGES: ENGLISH

A multi-ply paper bag of gusseted pinch-bottom type is provided with a plastic film liner which is only loosely bonded to the adjacent paper ply. The liner may be provided with end seals which are not involved in the end closures of the paper part of the bag. Thus, the paper plies may be stripped away from the filled and sealed plastic bag, and the exterior of the plastic bag can be sterilized prior to opening. The bag can then be opened and emptied without contaminating its contents.

DOCUMENT TYPE: JOURNAL ARTICLE

LANGUAGES: SWEDISH

Three main types of sacks were studied: sewn multi-ply paper bags (creped paper plus PE liner) with infolded sides for urea (46%), KV (Clupak) paper valve bags (also with PE liner) with canister bottom for wood nitrate (32-33% N), and welded (heat-sealed) plastic bags for ammonium nitrate (34.5%). The field expts. included storage, transport from railroad depot to air field, aerial spreading, disposal, and costs. Comparative performances of bags from various aspects are indicated.

Title: THE UBIQUITOUS PAPER SACK

Authors: Rudd T

Source: MATER. HANDL. NEWS no 224 July 1976 pp 81 83

Publication Year: 1976

Document Type: Journal Article

Language: unspecified

Pira Subfiles: International Packaging Abstracts (PK)

Journal Announcement: 7611

Abstract: A new campaign to promote the use of paper sacks has been launched by the Paper Sack Development Association, representing 13 UK paper sack manufacturers. With the advent of multi - wall sacks incorporating a variety of plies, linings, coatings, impregnations or reinforcing materials, paper sacks can now reportedly be used to package toxic or sensitive chemicals. When the sacks are left in the rain, moisture does not penetrate the contents. Paper sacks can withstand a number of 10 ft drops on the bag corners and reportedly have better puncture resistance than plastics materials. It is also claimed that they form a more stable pallet load than plastic containers, occupy one-fortieth of the space needed by alternative rigid products when empty; can be overprinted to a high standard and can incorporate waste paper to save raw material.

In the pkg. of matls. there are many instances where a sack or bag may serve as well, or better, than a more elaborate package, such as a rigid carton. The range of bag constructions is revd. These include multiwall paper sacks, plastic film-lined paper bags, plastic film bags, woven constructions of various matls., and nettings incl. the new integrally-extruded plastic nettings. The capabilities of the various types are examd. and compared. The concept of a returnable bag pkg. system is considered.

BARRIERS IN SYNERGIZED PYRETHRINS-TREATED PAPER BAGS TO PREVENT MIGRATION OF PIPERONYL BUTOXIDE INTO CORNMEAL, FLOUR, AND CSM

Highland, H. A.; Secreast, M

SOURCE: U.S. Dept. Agr. Tech. Bull. no. 1475: 1-14 (1973).

PUBLICATION YEAR: 1973

DOCUMENT TYPE: JOURNAL ARTICLE

LANGUAGES: ENGLISH

The migration of piperonyl butoxide from the outer treated ply of multiwall kraft paper bags having various barriers into the bag contents (flour; cornmeal; or CSM, a cereal consisting of cornmeal, soy flour, dry milk, vitamins, and minerals) was determined. Greaseproof paper liners were the best insect barrier tested. Almost as effective were saran-coated kraft barriers precoated with styrene-butadiene. A PE/saran-coated kraft barrier was less effective than either the greaseproof paper or the styrene-butadiene/saran-coated kraft. Piperonyl butoxide residues in cornmeal and flour in bags with a PV alc.-coated kraft ply were similar to residues in the control bags, whereas CSM in bags with a PV alc.-coated kraft ply had higher residues than CSM in control bags. Two saran coatings over styrene-butadiene or PE provided better protection than did a single coating. Pinholes in the saran coating did not greatly decrease the effectiveness of the coatings. Most of the treated bags resisted insect infestation for 15 months regardless of the type of barrier. (14 tab.)

Abstract: Improvements to can designs, the switch to advanced paper , increased percentage of recycled materials used, reduction in costs and lightweighting have helped steer Sonoco Consumer Products forward. Production of the company's board cans in Manchester and at Lievin in France is up by 8%. Formerly a joint venture company, CMB Sonoco Composites, Sonoco is now sole owner having bought out the CMB holding. The new design of board cans offer environmental benefits and shelf appeal as well as 15% savings in cost compared to tin cans. Latest developments include the Can-O- Bag with a sealed top, the SafeTop with outwardly curled top rim and peelable diaphragm, eliminating the need for a metal ring, and non-round cans produced in the USA.

Title: HOT MELT BREAKTHROUGH YIELDS TOUGHER BONDS WITH FEWER PROBLEMS

Source: PACKAGE ENGNG vol 25 no 1 Jan 1980 pp 48-50

Publication Year: 1980

Document Type: Journal Article

Language: unspecified

Pira Subfiles: International Packaging Abstracts (PK)

Journal Announcement: 8006

Abstract: The development by Nordson Corp. and use of a foaming hot melt adhesive system to improve adhesive properties are described. Details are given of the features of hot melt adhesion improved by foaming, including: longer time before the joining of two surfaces, quicker setting time once surfaces are joined; improved spreading properties; greater gap filling ability; less thermal distortion of substrate; improved wetting and reduced adhesive consumption. The equipment required for the production and application of foamed hot melt adhesives is considered. Advantages in the use of foamed hot melts for bonding thin polyethylene film to heavy duty paper liner in the formation of industrial sacks and in sealing of the sacks after filling are explained. Future areas for the use of foamed hot melt adhesives are discussed.

Sepap integrates into a Swedish firm
(AssiDomaen purchases a 51% stake in Sepap for 130 mil USD)
Svet hospodarstvi, p 7
June 12, 1997
ABSTRACT:
Sepap Steti (Steti, Czech Republic), paper firm, has a 90% stake held by
the paper and forestry company AssiDomaen (Sweden). AssiDomaen bought a
51% decisive stake in Sepap for 130 mil USD, 4.1 bil Kc, from Daventree
(Bahamas). In 1996 Sepap saw proceeds of 5.6 bil Kc and a gross profit
of 872 mil Kc. The firm's production capacities are 305,000 t of pulp
and paper. Sepap has focused its development on four production programmes,
bag paper and paper bags, unilaterally glazed packaging paper, liner
production and bleached sulphate pulp production.

Sepap before the end of the first investment stage (Sepap is investing 1.56 bil Kc in pulping operations; will boost bleached and unbleached pulp output)

Svet hospodarstvi, p 6 February 15, 1996 ABSTRACT:

Sepap (Czech Republic), pulp producer, will end the first stage of its investment programme in 1996. The programme includes the implementation of bleached chemical sulphate pulp production by chlorineless bleaching technology from March 1996. The firm will increase the production to 187,000 t/y, one third more vs the present. The firm's production of 115,000 t/y of non bleached pulp will increase too. Sepap's investments in pulp production will total 1.56 bil Kc. The second stage will include quick returnable investments in the production of bag liners and diagnostics. The third stage will include investments in strategically suitable firms in Middle and East Europe. The investments are expected to be 4-6 bil Kc during three stages. Sepap expects to see a turnover of 9 bil Kc in 1996 vs 7.2 bil Kc in 1995. About 55-60% of the firm's proceeds should be represented by exports in 1995. Sepap's pre-tax profit should be about 1.65 bil Kc in 1996 vs 1.2 bil Kc in 1995. Sepap has a 50.96% stake held by Stratton (US), together with Harvard Capital & Consulting (Czech Republic) and a 39% stake by AssiDomaen (Sweden).

Types of Packaging Bags / Packaging Fabric

The following are two broad classifications of bags manufactured by us:

WOVEN FABRIC & SACKS

The Product offered can be made from HDPE or PP as required and is in the form of finished Circular Woven Sacks requirements. Corona treated printing offered on request. The material can printed / unprinted and laminated or unlaminated to suit customer's size and

PAPER LINED BAGS

The Paper Lined PP / HDPE Bag is as Sandwhich Lamination. These Bags with special self closing valves are manufactured on a Tubing Machine Sack Kraft Paper and PP / HDPE fabric and is centre welded using high quality for suited ideally

Polymers. Block Bottom Paper Lined Bags are also offered. We have also bag with gussets and printing on the developed a stiff PP outside laminated **Petrochemicals** ð packaging Gussets. Flat fabric in continuous lengths of upto also be offered in the form of Tubular / 3000 Meters. One of our speciality is to Stabilized material can be offered on Bale Wraps widely used for Packing of Staple Fibre used in Europe. UV manufacture a variety of Box Bags

Advantages

request

Woven bags and sacks of HDPE and paper lined bags offer several advantages over other industrial packaging material. Some of the advantages are:

Moisture Proof

HDPE / PP Bags are inherently moisture repellent

Light Weight

HDPE / PP Bags being light weight, offers easy and cheap transportation Printing

Bright 2 / 3 Colour printing offers aggressive marketing prospects

Stackability

No problems in stacking. Can be gussetted to further improve stacking

Strength

High Tensile strength and long life. No corrosion

Economical

Highly economical compared to other alternative packing material
